As a leading university hospital with a rich tradition, the Inselspital is part of the Insel Group and is a centre of medical expertise and high technology with an international reputation as well as being a first-class training and research centre.

Department of Neurology

Neuroimmunology Team

examined immediately or upon agreement limited for 3 years

PhD Student

with a background in natural science

100 %

Our team currently consists of research assistants with a background in biology and medicine. In our dynamic working environment, teamwork and motivation are just as important as a constant exchange with scientists throughout the world and thus the active participation at national and international congresses. Our work is absolutely relevant to practice. We are committed to improve the therapy of patients with multiple sclerosis.

The challenge

As part of our SNF (Swiss National Found) funded project, you will aim to improve the effectiveness of glucocorticoids in the treatment of multiple sclerosis.

In order to develop the project content wise and methodologically, great teamwork skills as well as responsible and committed work are required. The diverse laboratory technologies include histology, molecular biology and cellular culture as well as the care and handling of laboratory animals.

Your profile

• Enjoying research and having a particular interest in neurology and immunology
• Ideally, already experienced in the area of neuroimmunology or the methods mentioned above
• A university degree (M.Sc.) in natural sciences
• Experienced in the care and handling of laboratory animals (in accordance with LTK-1)

The package

We offer a friendly, international dynamic and team-oriented scientific environment, excellent facilities for research with well-equipped laboratories and the support for an academic career.

Contact
