ILIAS
Use of ILIAS tools

Content | Present Informations

File: Upload files of every format individually or as a package and offer for download

DigiSem: The university's library scans any literature you want and makes them available in your ILIAS course as a digital reserve shelf available to the students for download

Weblink: Make available internal or external links or link collections

Content Page: Place and display information on a single page

Glossary: Offer term definitions, write your own term definitions

Learning module: Create self-contained multimedia learning units and incorporate your own HTML pages

Web feed: Subscribe to webfeeds to follow the news from other websites

Data collection: Collect, filter and search data in a database

Video and Audio | Working and learning with media

Video (Opencast Series): Publish recorded lectures, annotate and analyse videos

Interactive Video: Deepen the discussion with videos, thanks to question and comment function

Media pool: Collect picture, audio and video files in a pool and keep ready for other ILIAS tools (e.g. Learning module)

Organisation | Organize semester progress & deadlines

Folder: Store materials chronologically or functionally and make available

Session: Create course deadlines and assign corresponding materials, organize registration for events, excursions or courses

Item group: Collect existing course material in object groups and reassign as desired

Learning Sequence: Bring several objects into a sequence so that they can be worked through one after the other.

Forum: With corresponding adjustment of rights in the forum, announcements and news can be shared quickly with all course participants

Group: Use the group's admission rights to register for events, seminar groups or courses
