The Laboratory for High Energy Physics (LHEP) and Albert Einstein Center for Fundamental Physics (AEC) at the University of Bern invite applications for a

**PhD student position in medical applications of particle physics**

The position will be in the framework of our activities at the Bern medical cyclotron. Thanks to its characteristic beam transport line, we are currently developing new particle accelerator and detector methodologies as well as novel isotopes for theranostics. In particular, we aim at producing Positron Emission Tomography (PET) isotopes by proton irradiation and alpha/beta emitters for therapy by photonuclear reactions using electron accelerators.

The successful candidate is expected to play an active role in our scientific activities, which will involve both hardware work and data analysis. He/She must have a Master degree (or equivalent) in physics and good knowledge in the field of nuclear and particle physics applied to medicine. Experience with radiation physics, hardware, data analysis as well as knowledge of programming will be positively considered in the selection procedure.

The position has duration of up to 4 years. Applications will be reviewed starting September 15th 2018 and accepted until the position is filled.

Interested candidates are requested to send by e-mail a letter of application, CV, list of publications, and the names and addresses of three references (no letters, these will be requested at a later stage).
