

Systematic searching methods for your publication: a researcher's course

Course Description

Systematic literature searching skills are essential for research and publication. Participants will deepen their understanding of search strategy development and information retrieval. We will review essential resources and demonstrate techniques to improve the overall quality of your literature search.

This course is designed to be multidisciplinary.

Learning Objectives

You will be able to:

- Translate a research question into a database search
- Design a comprehensive search strategy
- Apply various search techniques
- Evaluate and refine search results
- Document and report your search methods and strategies

Individual Feedback

Participants will have time to ask specific searching questions and work on their research topics. Participants can submit their topics in advance to support_med@ub.unibe.ch

Trainers

Tania Rivero, Bibliothek Medizin

Target Group

PostDocs and PhDs working in the fields of medicine, human and social sciences with some understanding of literature searching.
