Fixing academia?

Towards a culture of collaboration

Excellent research is possible in an academic culture characterised by appreciation, fairness and equal opportunities. Inclusive leadership and team culture providing psychological safety are the foundations for successful research.

The keynote lecture by gender expert Prof. Liisa Husu, Örebro University, focuses on the dynamics of research careers, discussing especially the role of non-events, but also the role of different gatekeepers and gatekeeping in academia.

A panel with renowned experts in science studies, psychology and academic leadership discusses concrete approaches to action for a diversity-conscious culture of scientific collaboration.
